New FileCloud Server 191. Release!

CodeLathe customers get a huge boost in supporting financial regulations with FileCloud's new Governance features. The management dashboard and retention policy features have been designed to help regulators manage all digital content for legal, regulatory, compliance, and internal requirements. FileCloud allows regulators to manage content effectively - that means seeing what is occurring in a large installation with thousands of users on a day-to-day basis. CodeLathe knows that governance is also evolving, and as requirements change, our software is flexible enough to handle the new requirements.

In addition to new features, FileCloud users will also notice how much faster FileCloud responds to your requests. This is due to improvements in background processing, allowing FileCloud to work more quickly when you are sharing files and storing data. Many other improvements have been completed to provide users with an even richer experience, especially to the Sync and Drive clients that synchronize data with FileCloud.
