

# reCaptcha Settings

Starting with Version 19.3, FileCloud supports reCaptcha v2. When you enable reCaptcha integration, reCaptcha is applied when users log in to FileCloud and when they access a password-protected file or folder share.

## To configure reCaptcha:

1. Register your site at <https://developers.google.com/recaptcha> and get a key pair.
2. In the FileCloud Admin portal, go to Settings > Third Party Integrations and click the recaptcha tab.
3. Check **Enable reCaptcha integration**, and enter your key pair into **reCaptcha Site Key** and **reCaptcha Secret**.
