

# Mod Rewrite Setup Check Fails

## Mod Rewrite Setup Check Fails during Install

1. Verify that the mod\_rewrite apache module is properly installed and activated
2. In Apache configuration file for the site, ensure "AllowOverride All" is set correctly for the site.
3. Ensure, that the Apache *.htaccess* file is present in the WWW Root (say /var/www or c:\xampp\htdocs)

For HTTPS sites if everything else works but mod rewrite check error still is reported you can ignore it
