

Managing Metadata Attributes

Administrators can manage metadata tags in FileCloud Server.

Attribute Types

Each attribute can have one of the following types:

Attribute type	Accepted values	UI editor type	Values validation
Text	Regular text value	TextBox	-
Integer	Integer numbers	TextBox	Type validation
Decimal	Decimal numbers	TextBox	Type validation
Boolean	True / False value	CheckBox	-
Date	Date value	Date picker	-
Enumeration	One value from a list of predefined values	Drop down / Select	-
Array (Tag)	A number of custom values provided by user	Tag Input - custom editor	-

⚠ Attribute type cannot change once the definition is saved.

You can use the following ways to manage attributes:

- Edit Metadata Set Definition window

- A new attribute can be added by clicking the "Add Attribute" button in the Attributes section of the Metadata definition widget.
- Existing attributes can be edited by clicking the "Edit Attribute Definition" icon.
- Existing attributes can be removed by clicking the "Delete Attribute Definition" icon.

- Tag Input Editor

- Tag input is a custom editor that allows users to provide multiple values for a single attribute with a better experience.
- It looks like a regular TextBox but supports multiple values.
- When user writes a string and presses the Enter or enters a comma a new value is added to the control.
- It's called a Tag and appears as a text in a blue rectangle. Values can be removed by pressing the cross icon.
- It is used as the editor for the Array attribute type (in the User Core UI) and as the editor for Predefined values for enumeration attribute type (in the Admin UI).

➔ See a video on [Managing Attributes](#).

⚠ All attribute definition changes take effect when the whole set definition is saved.
