

# Formatting wiki content

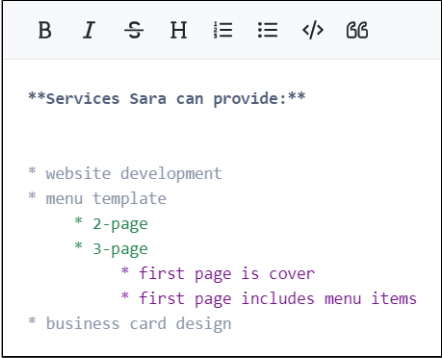

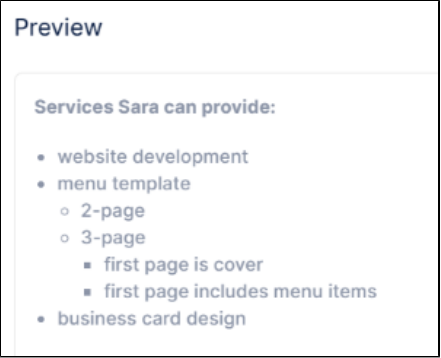

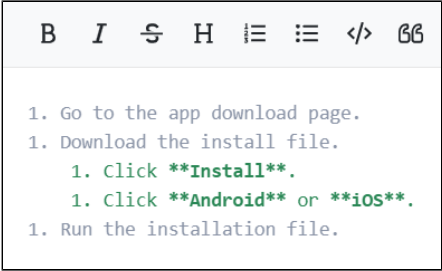

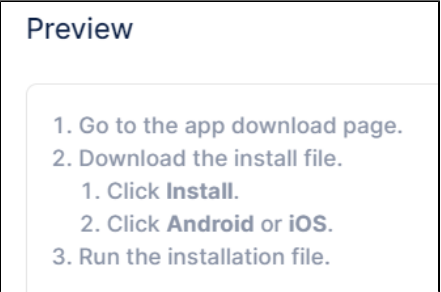

You can format the text you enter into the wiki editor using Markdown, a simple formatting language that lets you enhance plain text with styling such as italics, bold print, bullets and indents.

In the following example, the wiki editor includes a list of services preceded by asterisks. In the preview panel the asterisks appeared as bullets, which is how they appear in the actual wiki. You can also use the shortcuts in the text editor's menu bar to insert Markdown.

 When you make changes in the Wiki editor, click **Publish** to save your changes before closing.

The following table shows Markdown symbols and the effect they have when the text is formatted in the wiki:

| Markdown feature                                                                                                                                                                                                                                                          | In text editor                                                                                                                                                                                                                                                                                             | In wiki                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
