

# 20.1 Sync Installer Options

You can configure additional options by using the command line.

- This is useful mostly to administrators
- It gives you more flexibility to install FileCloud Sync on a large number of client computers.

## FileCloud Sync App Installer Command Line Options

Option	Notes
<b>/SILENT, /VERYSILENT</b>	Instructs Setup to be silent or very silent. When Setup is silent the wizard and the background window are not displayed but the installation progress window is. When a setup is very silent this installation progress window is not displayed. If a restart is necessary and the ' /NORESTART' command isn't used and Setup is silent, it will display a <i>Reboot now?</i> message box. If it's very silent it will reboot without asking.
<b>/NORESTART</b>	Prevents Setup from restarting the system following a successful installation, or after a <i>Preparing to Install</i> failure that requests a restart. Typically used along with /SILENT or /VERYSILENT.
<b>/TASKS="explorerintegration"</b>	Installs the explorer integration add on when using the command line
<b>/TASKS="!explorerintegration"</b>	Disables installing the explorer integration (avoiding requiring Admin privileges)
