Misc Settings

Indexed Folders (Specify indexed folders)

Tonido by default will index Pictures, Videos, and Music folder that is in Documents. You can also click on "Add Folder to Index" to add any other media files to be indexed. Indexing can be done Automatically / Manually. Finally, enable "Enable indexing" check-box.

Allowed Folders (Specify Allowed Folders)

Tonido by default shows all your files in your computer or device. To restrict access to only a few folders that you wish to show remotely, you can add these folders and enable the "Enable access to only selected Folders" check-box. If you are modifying the list, it is recommended to disable the check-box, add the new folder and then re-enable the check-box.

Ignore List (Hide file and folder names)

You can use this feature to remove certain files from file listings. The strings used are matched using "Regular Expressions".

Jobs (Background jobs in progress)

Shows the status of jobs that were started by "**Prepare Media**" function. Prepare Media recursively goes through all the folders on which it is run and then creates image thumbnails and images suitable for slideshows. This speeds up image gallery browsing considerably.
