

# Fedora

## Tonido On Fedora

### Requirements

- Tonido requires you to set SELinux to either "permissive" or "disabled" due to the way libraries for the Torrent and Workspace application are accessed. This is known as "text relocation".

### Steps

1. Download Set SELinux to either "permissive" or "disabled" by editing /etc/selinux/config as a root user. Reboot to enable the changes.
2. Download and double-click the RPM. Type in the root password to install it.
3. Go to "<http://localhost:10001>" in your browser. Tonido should be running.
4. (Optional) To start Tonido on boot, open a Root Terminal and run "chkconfig tonidod on".
