

Headless System Configuration

Configuration on Headless Systems

If you are running Tonido on a system without display, you will need to follow the steps below to setup Tonido correctly. First, you will have to change a config setting to create a profile remotely.

Do the following:

1. Start Tonido first by running the tonidoconsole binary to let it initialize the config data. Stop Tonido.
2. Navigate to the following location: ~/tonido/data
3. Open the configex.xml file
4. Change the following values

```
<rowentry>
  <name>WebAccess</name>
  <type>string</type>
  <value>local</value>
</rowentry>
<rowentry>
  <name>RemoteAdmin</name>
  <type>bool</type>
  <value>0</value>
</rowentry>
```

To

```
<rowentry>
  <name>WebAccess</name>
  <type>string</type>
  <value>all</value>
</rowentry>
<rowentry>
  <name>RemoteAdmin</name>
  <type>bool</type>
  <value>1</value>
</rowentry>
```

5. Restart Tonido using the tonidoconsole app
6. Open your browser and navigate to <http://<serverip>:10001>
